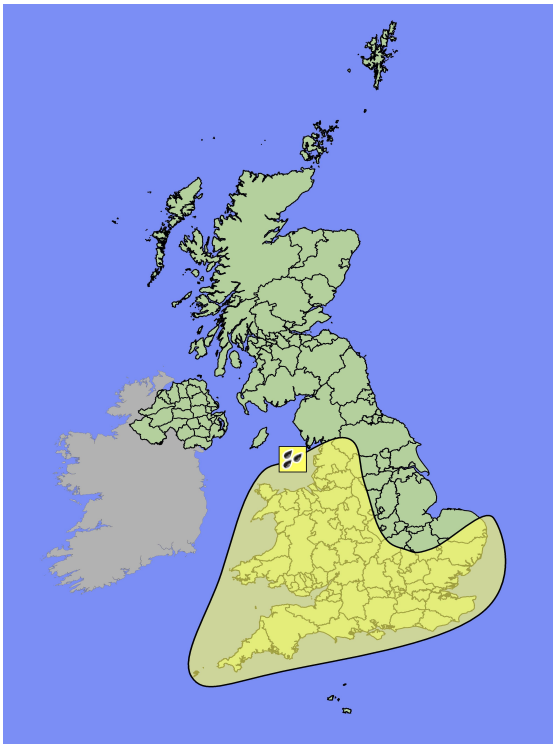
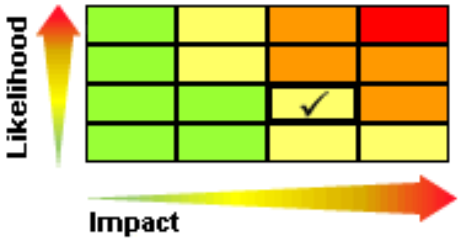
National Severe Weather Warning Service





Chief Forecasters Assessment
The depression currently affecting the UK is expected to be centred near or over southwestern UK by midday Wednesday, bringing further showers and rain to many regions. There is a risk of further large rainfall totals accumulating across some areas, in particular over parts of Wales and southern England. Here there is the potential for local accumulations of around 50 mm. After the recent wet weather, this further heavy rain could cause localised surface-water flooding.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **00:00 on Wed, 26th Sep 2012** until **23:59 on Wed, 26th Sep 2012**

Further heavy rain or showers will affect many parts of Wales and western, central and southern England during Tuesday night and Wednesday.

The public should be aware of the risk of localised surface-water flooding.
